Duearity and PRETTL Electronics Group have entered into a letter of intent with the goal of jointly developing and marketing Tinerity-AI

Duearity AB and the German company PRETTL Electronics Group have today signed a Letter of Intent with the goal of entering into a collaboration agreement that aims to jointly develop Tinerity-AI. The collaboration has the potential to greatly increase the opportunities to reach the market faster with a cost-effective product.

Duearity AB and PRETTL Electronics Group aim to enter into a cooperation agreement latest by the fourth quarter of 2022. The companies' ambition is to jointly develop the next generation Tinerity, an AI system that can be considered unique and aims to be used by those who are bothered or suffering from tinnitus and by the profession treating tinnitus patients.

PRETTL Electronics Group is a strong industrial partner and a collaboration means that the companies together have the resources and ability to develop, produce and market Tinerity-AI.

About Prettl

Based in Radeberg, PRETTL Electronics Group is one of the leading German system suppliers for Electronic Manufacturing Services (EMS). As a full-service partner our wide range of services encompasses professional solutions for development, prototyping, production, logistics and aftersales service as well as innovative processes for industrialization, obsolescence management and redesign. Numerous accreditations and certifications guarantee high quality support with a focus on energy technology, components for battery charging infrastructure, medical technology and industry.
